## Small programming based projects

### General Programming, HTML & CSS

Alloyfish retains a dynamic team of programmers able to work on your website development at reasonable rates. Our highly motivated team works well together to ensure that you get an appropriate specialist for each part of your task. Our general offering is ideally suited to the independent site owner or web developer who has a smaller task or tasks which he needs to be completed professionally and reliably.

Our programming expertise is based upon the following sectors:

- PHP
- HTML & CSS (including hand coding your graphical design)
- MySQL & PostgreSQL (for database-driven systems)
- Linux & UNIX systems

Short projects (usually under 25 hours) are charged at our normal hourly rate. We can provide an estimate for hours per project on request.

### Starting a Project

To get started, we need a short brief which contains the following information:

- **Contact Details**

- Your name
- Company name
- Email address
- Telephone number

- **Environment Details**

- Windows or Linux hosting?
- Current site language if any (e.g. PHP, ASP ...)
- Server access details (preferably FTP)

- **Task Details**

- Purpose of work (e.g. to allow users to search for articles)
- Task (include technical details or processes required where known)
- Timeframe

Also whether you require an estimated quotation (typically delays the project start)

### Payment

New customers and those abroad may be required to pay a deposit based upon a fraction of the estimated project costs. For most projects, payment terms are seven days. More frequent customers may apply for credit terms of up to 30 days subject to approval, and a monthly invoicing cycle.
